

# Humidity Solutions Ltd

## Gas Humidification is the clear solution for Bristol.

Humidity Solutions Ltd have supplied and installed a 90kg/hr Carel gas fired steam humidifier to serve a prestigious office block in Bristol. The personnel within the building were suffering from the effects of low humidity within their offices so Hoare Lea and Ptns special projects were called in to provide the solution.

Project management was provided by Maxwell Stewart with the humidifier serving the sites existing air handling unit so giving effective humidity distribution through out the four floors via the air movement system.

An Isothermal humidifier was required so a gas fired unit was selected. This choice kept the buildings energy bill to a minimum with a projected £2,000 per year saving on energy and a reduction of 15334kg of Carbon dioxide emissions per year compared to an equivalent electric steam humidifier.
